Generative AI in Finance
Call for Papers

September 25, 2024
Duisburg, Germany - 27th Banking Symposium

Generative artificial intelligence (GAI) will significantly impact and change the financial and banking sector. Large language models (LLMs) are at the forefront of this evolution, transforming financial services and creating substantial opportunities. With the sharp increase in commercial applications, economic, societal, and existential risks associated with the technology also receive more attention.

The aim of the 27th Banking Symposium is to bring together active researchers and practitioners interested in the transformation in banking and finance through GAI. We invite the submission of empirical, theoretical, and experimental papers from all fields of banking and finance that focus on opportunities, risks, and use cases of GAI. Early-stage work is encouraged. The final program will include several academic presentations and insights from invited experts from the industry.

There is no submission fee. We will reimburse travel costs and accommodation for presenters. The paper submission deadline is May 15, 2024. Please submit your papers to banking@uni-due.de. Paper selection will be finalized by the end of June 2024. Please direct further questions to banking@uni-due.de.

The symposium directly precedes the 30th DGF Jahrestagung in Aachen (September 26-28, 2024). It is possible to reach Aachen by train (direct connection) within 90 minutes.
